

Appendix 2

Street Trader – Ice Cream Van Derby Street

Consultation Response

I believe the consultation ends very soon in respect to air pollution on vehicles which I fully agree with as for me I know it will be about 5.5 k to have my van converted , the questions are (1)will there be a electric hook up available (I understand the safety issue) and how would the finance work if using electric ,(2) the alternative which is not an option is to spend 150-160k on a new van that meets the criteria of Europe 6 on diesel emissions, like I said I fully understand the serious issue of air pollution and hopefully we can work together especially on the electric hook up even if I have to move elsewhere.
